FOLLOW UP

The results of the survey show the lecturers of Indonesian Language and Literature Education bachelor's program have good performance in the four competence categories: pedagogical competence, professional competence, personal competence, and social competence. Overall, most of the respondents stated that the learning process implemented by the lecturers were excellent and satisfying. The study program conducts regular teaching staff meetings in the beginning of every semester as well as throughout the semester as scheduled to improve and maintain the quality of lecturers and learning.

SUGGESTION

Despite the good evaluation of the lecturers' performance in all the four competence categories, there are still small percentage of the respondents, 4% -5%, who believe that the performance is still low and need improvement. One of the issues is due to vast development in information technology which need lecturers' adjustment as soon as possible. Thus, it is strongly suggested that the lecturers keep accelerating their knowledge in related area through various professional development program to adapt with the future's need.
